Hi Jason,

Each leach field would be considered one well.

The septic system at a park manager's home is not a Class V well and does not need to be part of the inventory.

Please feel free to contact me if you need additional assistance and/or clarification. Thanks.

Nicole

**Subject:** UIC well inventory questions

Hi Nicole,

I am new to the project inventorying the injection wells here at the western region parks for NY State. I am filling out the 7520-16 inventory form and have a couple of questions. With a Class V septic system (5F/ 5W32) are each of the lines in the leach field from the distribution box considered a separate well or just one? Say a typical small leach field with 3 lines from the distribution box , is that considered as 3 wells or just 1?

In instances where there is subsurface discharge but it is from a single family residence such as the Park Managers house, it would not be considered a Class V well. Do you want verification giving the details or as simple as a comment indicating that it's a septic system with a tank and leach field.

Thank you,

Jason Gac, P.E.
